2013 Fall Webinar Series:
Medical Model to Person Centered Care: The Pivotal Role the Arts Play in Culture Change
Led by Pauline Daniels

The Global Alliance is grateful to the National Endowment of the Arts for its support of this webinar series, which strives to provide affordable resources to individuals and organizations wishing to establish or advance arts and health programming.
The traditional approach to the diagnosis and treatment of illness as practiced by physicians in the Western World...The physician focuses on the defect, or dysfunction, within the patient, using a problem-solving approach. The medical history, physical examination, and diagnostic tests provide the basis for the identification and treatment of a specific illness. The medical model is thus focused on the physical and biologic aspects of specific diseases and conditions...

Nursing Model

Nursing differs from the medical model in that the patient is perceived primarily as a person relating to the environment holistically; nursing care is formulated on the basis of a holistic nursing assessment of all dimensions of the person (physical, emotional, mental, and spiritual) that assumes multiple causes for the problems experienced by the patient. Nursing care then focuses on all dimensions, not just physical.

Dear Lord of the Universe,

You have given us our own space called Goodwin House. We have become a single unit and we grieve when one of our friends leave us. We feel diminished.

Help us to remember where they have gone. You met them and carried them to their heavenly home where they will dwell with the Holy Trinity, a world where there is no grief, no pain, only the height of love.

Amen.
